

CVS Account Intelligence

A persistent intelligence wiki for the PwC – CVS account team

A source-cited knowledge base maintained by an LLM editor that reads the same material the account team reads (SharePoint folders, Outlook recaps, Teams notes, Salesforce, SEC EDGAR, news, earnings) and synthesizes it into nine purpose-built surfaces. The wiki is the database; the surfaces are different views on it.

LAYER	WHAT IT DOES	COMPONENTS
Inputs	Internal and external sources, polled on a schedule or pushed by Power Automate flows.	SharePoint folders, Outlook and Teams meeting recaps, Salesforce pipeline and contacts, SEC EDGAR, Capital IQ and Bloomberg (PwC licenses), public news
Editor	Reads new sources, cross-references the existing wiki, rewrites affected pages, flags contradictions, logs every change. Human approves each pass before commit.	Azure OpenAI inside the PwC tenant; agent logic governed by AGENTS.md; full version history in the Azure DevOps repository
Surfaces	Nine purpose-built views on the same wiki, each answering a specific account-team question. See slide 2.	React renderer hosted on Azure Static Web Apps; Entra ID for partner-only access; SVG org chart derived from contact frontmatter
Status	Sprint 1 shipped: Home command center, Concierge chat, and the Editorial Briefing are live. Schema codified in AGENTS.md.	<i>Repository: github.com/DaylanLab/Account-Intelligence-Wiki</i>

Nine Surfaces, One Wiki

Same backbone, nine different views. Each surface is a different lens on the same wiki: same data, different output format, different trigger pattern.

#	SURFACE	QUESTION ANSWERED	DESCRIPTION	SPRINT
01	Account Concierge	What do we know?	Search-and-synthesis Q&A over the wiki with cited answers.	Sprint 1 (shipped)
02	Meeting Prep	How do I show up prepared?	One-page briefing before client meetings: context, prior interactions, talk track.	Sprint 2
03	Relationship Intelligence	Who knows whom?	Relationship map: strength, interaction history, warm-intro paths.	Sprint 3
04	Regulatory / Threat Trigger	What should we proactively bring?	External regulatory and threat signals (CISA, HHS/OCR, SEC, H-ISAC) turned into client-specific outreach.	Sprint 3
05	Pursuit Reuse	What can we reuse?	Finds reusable proposal language, SOWs, credentials, pricing assumptions, similar wins.	Sprint 4
06	Account Rhythm	What needs action?	Tracks follow-ups, stale opportunities, Salesforce hygiene, action owners, weekly summaries.	Sprint 4
07	White-Space Agent	Where are we underpenetrated?	Maps CVS business units against PwC practice coverage, prior wins, and relationships to flag gaps.	Sprint 5
08	BU Opportunity Radar	What should we pursue by BU?	Suggests opportunities by business unit from internal notes plus public signals.	Sprint 5
09	Issue-to-Solution	How do we turn pain into a PwC offer?	Converts client pain points into matched offerings, SMEs, credentials, and next-step actions.	Sprint 6
—	Editorial Briefing	Smartest read on the account right now	Long-form synthesized dossier — the artifact a partner reads before a high-stakes meeting.	Sprint 1 (shipped)
